

ASHISH PRADEEP PARDESHI

ashish.pardeshi1828@gmail.com | +1(848)-313-5464 | Jersey City, NJ

Professional Summary

Data Analyst with 5+ years of experience delivering analytics and automation solutions across insurance, healthcare, government, and telecom. Experienced in SQL, Python, Power BI, Looker, Excel, and ETL development, with hands-on expertise in claims analytics, financial reconciliation, data quality, and operational reporting. Proven ability to automate complex reporting workflows, integrate data across enterprise systems, identify financial and operational discrepancies, and translate business requirements into scalable analytics solutions.

EDUCATION

RUTGERS BUSINESS SCHOOL- New Brunswick, NJ

Dec 2024

Master of Information Technology and Analytics

- Coursework: Analytics for Business Intelligence, Project Management, Business Data Management, Data Analysis and Visualization, Business Analytics and Programming, Neural Networks and Deep Learning, IT Strategy

UNIVERSITY OF MUMBAI- Mumbai, Maharashtra

May 2020

Bachelor of Engineering: Electronics and Telecommunication

- Coursework: Management Information Systems, Big Data Analytics, Database Management Systems

CERTIFICATIONS

- Google Analytics G4**– Skilled in campaign tracking, attribution models, and digital KPIs (CTR, CPC, ROAS)
- Earned **Project Management & Microsoft Project** certification from PMI through LinkedIn Learning
- SAP S/4HANA** Course in progress

Sep 2026

TECHNICAL SKILLS

- Programming & Analytics:** Python, R, Java, JavaScript, YAML, SAS
- Data & Databases:** SQL (MySQL, Oracle), NoSQL (MongoDB, DynamoDB), ETL pipelines, Data Validation & Cleansing, REDCap
- Visualization & Reporting:** Tableau, Power BI (DAX, Measures, Calculated Columns, UX Design), Excel (Advanced formulas, Macros, VBA)
- Automation & Cloud:** API Integration, Flask, Azure, PowerApps, SharePoint, Snowflake, Databricks (basic), Alteryx
- Collaboration & Tools:** GitHub, JIRA, Agile/Scrum, Microsoft Office Suite (Word, Excel, PowerPoint, Access), Microsoft Visio, Miro (basic)
- Statistical & Modeling Tools:** RStudio, Quantitative Analysis, A/B-testing, Anomaly Detection

PROFESSIONAL EXPERIENCE

Tower Auto Mall – Fort Lee, New Jersey

May 2026 - Present

Data Analyst

- Analyzed and reconciled **250K+** insurance claim-record validations across recurring loss runs and financial reporting cycles, evaluating reserves, payments, expenses, and subrogation activity to identify discrepancies and ensure accurate management-level financial reporting.
- Engineered automated reconciliation and duplicate-detection workflows using **Python, SQL, and Excel** to process high-volume claims data across Claim Number, Claimant ID, VIN, Date of Loss, claim type, and financial attributes, identifying **600+** duplicate records and eliminating extensive manual record-by-record validation.
- Built **automated** financial and subrogation analytics covering **\$50M+** in gross incurred exposure, consolidating indemnity payments, reserves, expenses, recoveries, and outstanding balances to improve management visibility into claim-level financial performance and recovery opportunities.
- Automated cross-system data validation across **Filevine, NetSuite**, loss-run, billing, and **12K+** vehicle/VIN records, implementing reconciliation and exception-reporting controls to identify missing or inconsistent records and improve data integrity across claims, finance, and operational reporting.

Appex Innovation Solutions- Princeton, New Jersey

Dec 2025 – Apr 2026

Data Analyst

- Analyzed and transformed **10M+ healthcare records** using **Google BigQuery on GCP**, enabling scalable analytics for patient engagement and care-management platforms
- Built **15+ interactive Looker dashboards** tracking clinical, operational, and user-engagement KPIs, reducing ad-hoc reporting requests by **40%** and improving stakeholder visibility
- Processed and validated **FHIR-based healthcare data** (Patient, Encounter, Observation, Medication resources), improving data accuracy and interoperability across systems by **30%**
- Optimized complex **BigQuery SQL pipelines**, reducing query execution time by **35%** and enabling near real-time analytics for product and clinical teams
- Partnered with engineering and product teams to deliver analytics aligned with **HIPAA-compliant data governance**, supporting secure reporting for **50K+ active users** across MyHealth and iCareSecure platforms

Data Analyst

- Developed and implemented **data-driven solutions** to support the **public procurement and supply chain ecosystem**, enabling better classification and matchmaking of small businesses with relevant government contract opportunities
- Designed an automated **ETL** pipeline leveraging **Pandas and RapidFuzz** to match business profiles to NIGP and DPMC codes with **95%** confidence, significantly improving classification accuracy and reporting efficiency
- Owned reporting solutions end-to-end by building interactive **Power BI dashboards** and **Excel-based** decision tools that enabled state procurement leaders to access real-time supplier performance metrics, and improved decision-making by **35%**
- Collaborated with **cross-functional stakeholders** across government operations, data teams, and procurement units to define project goals, **gather business requirements**, and deliver actionable insights through interactive **Power BI dashboards**

Appex Innovation Solutions- New Brunswick, New Jersey

May 2024 – Jan 2025

Data Analyst

- Validated data flows and clinical datasets by designing automated **ETL pipelines** and implementing data cleansing and validation logic across **5M+** monthly PHI records from **REDCap** and other sources, ensuring HIPAA-compliant reporting accuracy and data integrity for healthcare dashboards
- Delivered interactive **Power BI dashboards** visualizing patient engagement, provider performance KPIs, utilization trends, and clinical metrics, enabling data-driven decision-making and accelerating C-suite reporting cycles
- Conducted **A/B testing** and statistical analysis on appointment reminder strategies using pre-/post-engagement metrics to measure the causal impact of predictive adherence models, improving scheduling efficiency by **18%** and strengthening data-driven healthcare operations
- Automated data extraction, transformation, and loading processes from **REDCap** and related clinical systems using **SAS**, reducing reporting turnaround from 3 days to 6 hours while minimizing manual reconciliation errors by 40%
- Implemented data **governance frameworks, compliance protocols, and audit readiness standards** aligned with HIPAA, PHI handling, and data quality assurance, ensuring adherence to healthcare regulatory reporting requirements
- Integrated **Azure Blob Storage** as a secure staging layer for structured and semi-structured clinical datasets (JSON, CSV, API extracts), streamlining ETL ingestion workflows and improving data availability for **Power BI reporting**

Infosys IT Consultancy & Services Ltd- Mumbai, Maharashtra.

Oct 2020 - Apr 2023

Data Analyst

- Architected and optimized enterprise-scale data pipelines using **Python, SQL, and Alteryx** to improve query performance by **30%** and enable faster, data-driven decision-making across telecom business units
- Devised scalable semantic models to assess CSAT, ARPU, churn, and growth metrics, delivering insights through **Power BI dashboards** that increased customer satisfaction by **15%**
- Partnered with **10+** cross-functional teams, driving data-driven automation in the **Openreach Flow system**, enhancing customer engagement for **millions of users**
- Collaborated with data engineering and **RPA** automation teams to align automation outputs with enterprise reporting needs, enabling consistent KPI tracking across telecom operations and reducing manual reporting effort by **40%**
- Delivered standardized performance and incentive analytics by maintaining **historical Excel/SQL repositories**, producing KPI dashboards aligned to targets and budgets, conducting trend and **variance analysis**, and training analysts and stakeholders as a data **SME** to support leadership and field reporting needs.
- Translated business requirements specifications from the operations team into clear **20+** technical documents, enabling seamless integration between the operations team and automation teams, ensuring high data integrity and process efficiency

PROJECTS

Stock Pulse – Real-Time Stock Prediction App

Apr 2024

- Designed a cloud-deployed, real-time stock prediction system using **Django, JavaScript**, and the **Yahoo Finance API**, hosted on **Azure App Service** for scalability and a seamless user experience.
- Applied **statistical analysis** and an **LSTM** model with **pandas** and **matplotlib** to improve trend prediction accuracy by **30%**
- Incorporated a **risk analysis** module that reduced user losses and benefited **65%** of active users with actionable insights

From Data to Glory - Player Performance Prediction with Neural Networks

Apr 2024

- Built a machine learning model using Python, Keras, and FIFA datasets to predict player performance with high accuracy
- Implemented machine learning **Random Forest** and **Gradient Boosting techniques**, optimizing model performance by **15%**
- Developed a feature selection mechanism that streamlined data processing, improving evaluation speed for **40+ players**

Indian Premier League- DBMS and Visualization

Dec 2023

- Led a data management project by curating IPL datasets, **designing ERDs using Microsoft Visio**, and delivering insights that improved efficiency by **20%**
- Optimized data extraction and cleansing processes using **Python and SQL**, significantly improving data integrity by eliminating inconsistencies such as duplicates and null values
- Implemented **over 10 Tableau dashboards** and executed over 50 **SQL queries**, generating insights that informed player investment strategies.
