

ASHISH PRADEEP PARDESHI

ashish.pardeshi1828@gmail.com | +1 (848) 313-5464 | Jersey City, NJ

PROFESSIONAL SUMMARY

Business & Data Analyst with 5+ years designing and automating workflows across insurance, healthcare, and government sectors, owning the translation of messy, cross-system business processes into working, monitored solutions. Skilled at identifying where automation removes repetitive risk from a process, where a human needs to stay in the loop, and how to catch failure before it reaches production, with experience building semantic models to track revenue and growth metrics such as ARPU, churn, and CSAT. Applies AI/LLM tools (Claude, ChatGPT) to accelerate analysis and workflow design. Partnered with engineers, risk, and operations teams to reconcile \$50M+ in financial exposure and cut reporting cycle time from 2 days to under 2 minutes.

PROFESSIONAL EXPERIENCE

Data Analyst - Tower Auto Mall - Fort Lee, NJ

May 2026 to Present

- Designed an automated reconciliation workflow across Filevine, NetSuite, and loss-run systems, mapping which system held the source of truth and documenting data lineage for 12K+ vehicle/VIN records, building exception logic to flag mismatches for human review rather than auto-resolving them, and reducing \$50M+ in financial exposure from undetected errors.
- Diagnosed root causes behind 600+ duplicate and inconsistent records across 250K+ insurance claims, then built a repeatable remediation process, rather than a one-time fix, so the same failure mode wouldn't recur.
- Introduced and evangelized a new automated remediation workflow to claims and finance teams who hadn't asked for one, setting the operating standard both teams adopted and running training sessions and documentation until they could operate it independently, replacing manual record-by-record review.
- Owned the end-to-end redesign of weekly financial reporting, cutting turnaround from 2 days to under 2 minutes by consolidating IME reports, loss runs, bill review data, and third-party invoices into a single automated workflow.
- Utilized AI/LLM tools (Claude, ChatGPT) to draft Python automation scripts, summarize inconsistent multi-source datasets, and accelerate technical documentation across reconciliation workflows.

Data Analyst - Apex Innovation Solutions - Princeton, NJ

Dec 2025 to Apr 2026

- Built operational KPI dashboards in Kibana, providing senior stakeholders real-time visibility into clinical and operational risk metrics.
- Applied regression and clustering analysis in STATA and SPSS to segment 450,000+ records, identifying trends and informing targeted engagement strategies.
- Analyzed and transformed 10M+ healthcare records using Google BigQuery, enabling scalable risk and operational analytics for patient engagement platforms.
- Delivered 15+ interactive Looker dashboards tracking clinical, operational, and engagement KPIs, reducing ad-hoc reporting requests by 40%.
- Optimized complex BigQuery SQL pipelines, applying AI/LLM tools (Claude, ChatGPT) to draft and refine queries, achieving a 35% reduction in query execution time to support near real-time reporting and issue detection.
- Validated dashboard outputs against source BigQuery tables through structured QA testing, identifying and resolving data discrepancies before stakeholder delivery.

Data Analyst - Rutgers Univ. / NJ Dept. of Treasury - New Brunswick, NJ

Feb 2025 to Nov 2025

- Forecasted procurement demand using automated ETL pipelines in Python, reducing manual planning effort for government stakeholders by approximately 30%.
- Matched business profiles to NIGP and DPMC codes with 95% confidence, maintaining a structured data dictionary and mapping reference that improved data accuracy and supported risk-informed procurement decisions.
- Created interactive Power BI dashboards and Excel-based decision tools, giving leadership real-time visibility into supplier performance and improving decision-making by 35%.
- Partnered with cross-functional government, data, and procurement stakeholders to translate complex technical findings into clear, actionable insights for non-technical leadership.

Healthcare Analyst - Apex Innovation Solutions - New Brunswick, NJ

May 2024 to Jan 2025

- Modeled engagement patterns using statistical testing and regression-based analysis, driving an 18% increase in adherence and informing predictive risk models.
- Engineered automated ETL pipelines and data quality controls across 5M+ monthly PHI records, applying AI/LLM tools to draft BigQuery SQL transformations and ensure regulatory-compliant reporting accuracy.
- Produced interactive Power BI dashboards visualizing engagement, performance, and utilization trends for C-suite risk and operational reporting.
- Accelerated ETL processes from REDCap, cutting reporting turnaround from 3 days to 6 hours while reducing reconciliation errors.
- Implemented data governance frameworks, data lineage documentation, and compliance protocols aligned with HIPAA and regulatory reporting requirements.

Data Analyst - Infosys IT Consultancy & Services Ltd - Mumbai, India

Oct 2020 to Apr 2023

- Architected enterprise-scale data pipelines using Python, SQL, and Alteryx, improving query performance by 30% and enabling faster risk and operational decision-making.
- Verified data pipeline outputs through root-cause QA testing, identifying and resolving discrepancies before delivery to stakeholders.
- Conducted ad-hoc querying and analysis in OBIEE, reducing time spent on ad-hoc reporting requests by 22%.
- Devised scalable semantic models to assess CSAT, ARPU, churn, and growth metrics, delivering insights through Power BI dashboards that increased customer satisfaction by 15%.
- Drove data-driven automation in the Openreach Flow system by partnering with 10+ cross-functional teams, enhancing customer engagement for millions of users.
- Standardized performance and incentive analytics by producing KPI dashboards aligned to targets and budgets, conducting trend and variance analysis, and serving as subject-matter expert who set the analytical standard adopted by analysts and stakeholders across the team.
- Translated business requirements into 20+ clear technical documents, ensuring high data integrity and seamless integration between operations and automation teams.

TECHNICAL SKILLS

- **AI & Automation Tooling:** Applies LLM-based tools (Claude, ChatGPT) to draft Python/SQL code, summarize messy datasets, and accelerate documentation; Alteryx for low-code process automation
- **Commercial & Revenue Metrics:** Semantic modeling of ARPU, churn, CSAT, and growth metrics; KPI dashboards tied to targets and budgets; cross-functional reporting with Finance and operations teams
- **Risk & Controls:** Risk analytics, control gap identification, issue management & remediation, root-cause analysis, data lineage & data dictionary documentation, regulatory compliance (HIPAA/PHI), audit testing
- **Business Intelligence & Data Visualization:** Power BI (DAX, Measures, Calculated Columns), Tableau, Looker, Kibana, OBIEE, Excel (Advanced formulas, Macros, VBA), scorecards & dashboards
- **Database & Data Management:** SQL (MySQL, Oracle), Oracle, ETL pipelines, NoSQL (MongoDB, DynamoDB), data warehouse querying, data validation & cleansing
- **Automation & Analytics:** Python, R, SAS, STATA, SPSS, machine learning (Random Forest, LSTM, neural networks), Flask, API integration
- **Stakeholder Management & Communication:** Cross-functional collaboration across risk, finance, operations, and technology; technical documentation; translating findings for technical and non-technical audiences
- **Collaboration & Tools:** GitHub, JIRA, Agile/Scrum, Microsoft Office Suite (Word, Excel, PowerPoint, Access), Visio, Miro (basic)

CERTIFICATIONS

- **Google Analytics GA4:** Campaign tracking, attribution models, digital KPIs (CTR, CPC, ROAS), Sep 2026
- **Project Management & Microsoft Project Certification:** PMI via LinkedIn Learning
- **SAP S/4HANA Course** (in progress)

EDUCATION

Master of Information Technology and Analytics - Rutgers Business School, New Brunswick, NJ	Dec 2024
Coursework: Analytics for Business Intelligence, Business Data Management, Data Analysis & Visualization, Neural Networks & Deep Learning, IT Strategy	
Bachelor of Engineering, Electronics & Telecommunication - University of Mumbai, Mumbai, India	May 2020
Coursework: Management Information Systems, Big Data Analytics, Database Management Systems	

PROJECTS

Stock Pulse: Real-Time Stock Prediction App

- Developed a cloud-deployed, real-time stock prediction system using Django, JavaScript, and the Yahoo Finance API, hosted on Azure App Service for scalability and seamless user experience.
- Performed statistical analysis and built an LSTM model with pandas and matplotlib, improving trend prediction accuracy by 30%.
- Incorporated a risk analysis module that reduced user losses, benefiting 65% of active users with actionable insights.

From Data to Glory: Player Performance Prediction with Neural Networks

- Constructed a machine learning model using Python, Keras, and FIFA datasets to predict player performance with high accuracy.
- Leveraged Random Forest and Gradient Boosting techniques, optimizing model performance by 15%.
- Assembled a feature selection mechanism that streamlined data processing, improving evaluation speed for 40+ players.

Indian Premier League: DBMS and Visualization

- Led a data management project by curating IPL datasets and designing ERDs using Microsoft Visio, improving efficiency by 20%.
- Refined data extraction and cleansing processes using Python and SQL, eliminating inconsistencies such as duplicates and null values.
- Executed 50+ SQL queries, generating 10+ Tableau dashboards that informed player investment strategies.
